

## Similasan Kid's Irritated Eye Relief

There are TWO Similasan Eye Drops that work well in dog's eyes.

One is this "**Kid's Irritated Eye Relief**" and the other is their "**Allergy Eye**" formulation. Both are quite effective at soothing pinkish, irritated eyes.

I've gotten this stuff at **Walgreen's**, and **Target** has it in the "contact lens care" section.

For **regular dogs with mild eye irritation** from say, pollen or groundlevel micropollution, ozone, or dryness. You would use this in one or both eyes anywhere from once, to three or four, times a day.

**For dogs with an "ulcer" in the eye** where steroids would be a hazard, Similasan can (sort of) reduce the redness pain and inflammation working in tandem with the **main** medications prescribed. Sometimes it's the **ONLY** thing that can safely reduce redness in an ulcerated eye. **NEVER** use Visine on a dog's eye.

If your dog has "**Dry Eye**" this medicine can be used once or twice a day **ALONGSIDE** some "Cyclosporine" or other immune-mediator. But neither Similasan nor Cyclosporine have antibacterial properties. You'll need to work with me

to figure out if an antibiotic would be good to use with these other meds.

**DO NOT BOTHER USING THIS IN SQUINTY, PAINFUL EYES.** Those dogs need to be seen in the office **PRONTO**.
